

24 hour Hazardous Waste Operations and Emergency Response (HazWOPER) training tailored to your specific needs delivered in-person. This 3 day course covers both classroom and hands-on exercises.

Overview

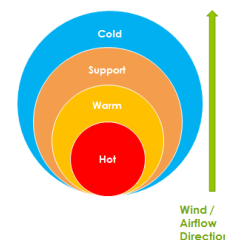

- **Our philosophy** - We believe employees benefit the most from training specific to their situation, facility and chemicals. That's why we tailor our HazWOPER training classes specific to your needs.
- **Training content tailored to your facility, hazards and needs** - We review facility, chemicals, and hazards to develop a unique training program based on your needs.
- **Custom spill response exercises** - We develop practical hands-on exercises unique to your company to clean up spills and hazardous wastes.

Additional Topics Include:

- **Cal-OSHA Compliant** - Our training content meets or exceeds all requirements set in 8 CCR 5192.
- **OSHA Compliant** - Our training content meets or exceeds all requirements set in 29 CFR 1910.120
- **Chemical Spill Cleanup** - We develop exercises based on your needs and focus on the types of spill cleanup materials for your application.
- **Hazard Assessment** - Employees will be guided through a walkthrough where they assess the hazards and potential response.
- **Case Studies** - We review case studies of industrial spills to implement lessons-learned and learn from real-life incidents.
- **Hazardous Waste** - Safe handling of chemicals, proper storage, MSDSs, labeling, controls, protective equipment, fume hood use.
- **Regulatory Review** - Our training includes an overview of the applicable regulations.
- **Personal Protective Equipment** - Our training covers the use and various levels of PPE. Employees will receive training and practice in the proper methods of donning and doffing PPE.
- **Technical Information** - We include technical materials on how to identify chemicals, chemical properties, chemical monitoring equipment, terminology, etc.

Hands-on Training

- **Personal Protective Equipment** - our practice drills are designed to use your in-house PPE and equipment. We emphasize practice and familiarity with the PPE employees will actually use.
- **Incident Reporting** - Reporting requirements at the federal, state and local level are covered based on your location and chemical inventory.
- **Custom Environmental Protection Exercises** - Our practice exercises focus on potential environmental situations unique to your facility.
- **Custom Emergency Response Exercises** - We develop hands on training responding to emergency incidents based on your facility and hazards.
- **Incident Command System (ICS)** - employees are taught the essentials of ICS and get the chance to perform the duties of incident commander during practice exercises.
- **Decontamination** - We develop practical hands-on decontamination exercises.

Success Stories:

-We recently delivered custom training to a high tech startup battery company focusing on their facility's layout and specific hazards including corrosives spill response, electrical safety and potential environmental hazards. Since the content was specific to their company, employees were very engaged throughout the training. The exercises and walkthroughs served to emphasize the need to identify equipment shutoff location and reconsider spill kit locations. The employees enjoyed the spill response drills which helped to reinforce and emphasize the course content.
